

How to set up WiFi on XTRONS Head Units

1. Find the WiFi connection in settings, the unit will search the available WiFi networks automatically.

2. Select the correct network and input the password to complete the connection. The connection status will show "connected" after the connection is completed.

If you have any other questions, please feel free to leave a message on the XTRONS forum or contact XTRONS support via techsupport@xtrons.com.
