

How to share media between XTRONS Head Units and Headrest

DVD Players / other Devices

You might want to connect your XTRONS head unit or other device that has a AV Out function to some XTRONS headrests monitors, or connect the twin monitors to share the same movies.

What You Need to Get Started?

Input to Headrest:

◆ With HDMI

Some XTRONS headrests series have an HDMI port. What you need is a HDMI cable. When you connect the HDMI cable to the headrest, you can share the screen of your device on the headrest. For example Play Station, Xbox or a smartphone.

◆ Using RCA

RCA cables are a reliable method of sending audio/video between devices.

Using a standard RCA cable, you can connect the twin XTRONS headrests or your XTRONS head unit to any XTRONS headrests for media streaming.

Each unit also has an AV in/out function allowing them to be connected together (all cables provided), by setting one of the screens to DVD and the other to AV mode. You can now play the same movies on both screens.

However, not all the headrests can output video on DVD, SD and USB. Please refer to the sheet below or confirm with customer service if necessary:

Model	AV output		
	DVD	SD	USB
HD705	YES	YES	YES
HD908T	YES	YES	YES

HD905V	YES	YES	YES

Full RCA output from head unit to headrest:

Some of our head units support a full RCA output when connected to our headrest screens, allowing for more options than just media streaming. Full access of the head unit menu on the headrest screen, including DVD, USD and SD, navigation information can be shown. This in effect works like screen mirroring or HDMI output.

The models listed below support full RCA output:
